

EPoS Case Study

Green World Garden Centre

Green World Garden Centre is a specialist nursery stocking an extensive range of semi-mature and mature specimen plants including trees, shrubs and topiary, with many showing savings of up to 50% off retail prices. With contacts from Europe, they offer a plant-finder service and can source and supply a large range of hardy specimens.

Green World's Owner had previous experience of Easitill sometime ago in another Garden Centre and when embarking on this venture decided to return to Easitill as its key EPoS provider in May 2010.

Green World also stock a range of pet products, which features weighed food. The Easitill system can handle weighed food in a variety of ways from fully integrated weighing scales, to barcode printing scales, to simply typing the weight in from a separate scale.

Apart from the obvious benefits, the Easitill system allows you to design, edit and customise your own Touch Screen buttons.

This is another way that you can tailor the features of the system specifically to your business.

Soon Green World are hoping to open a cafe and are in talks with Easitill to supply a hospitality system, which is currently used by many Easitill Garden Centre's with Coffee Shops.
